

HKS 700E Voltage Regulator 04Y-323

Pictured at the right is the 04Y-323 Voltage Regulator. This is a new style regulator installed on HKS 700E engines starting with S/N 100764.

Pictured at the right, the older style voltage regulator installed on engines with S/N 100763 and older.

Note: Some Engines between S/N 100756 and 100763 may have either the old style or the new style regulator.

If the 04Y-323 Voltage Regulator (newer style regulator) is to be used to replace an older style regulator, a special cable harness is required, part number 04Y-350. The cable harness is shown on the next page.

Pictured above is the 04Y-350 Cable Harness adapter used to connect the newer style 04Y-323 Voltage Regulator to an older engine.

Important: Please confirm which regulator is installed when ordering a new regulator. If necessary, please order the 04Y-350 harness as well.
